		Examiner		Art Unit				
		Dwayne K. Har		1797				
Period fo	The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Inventorship

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number:

10/054,023 Art Unit: 1797

3. Claims 31 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Orimo et al. (4,338,279) in view of Natterer et al. (5,027.578). Orimo teaches an automatic analyzing apparatus. The device is best shown in Figures 1, 3 and 4. The device is comprised of a housing (25) that includes a cover (26) with an opening (27) for venting heat from the cover. Inside the housing are elements used in chemical reactions including containers, feed mechanisms, and analysis equipment (columns 7 and 8). Orimo does not teach the use of a ventilation cover to evacuate vapors emitted from the device. The Examiner considers the device of Orimo to meet the broad limitation of an "oligonucleotide synthesizer" and notes that Applicant has not recited the synthesis of oligonucleotides in the claims.

Natterer teaches a packaging device for packaging materials. The device is best shown in Figures 1 and 2. The device includes a lid (3) having a suction opening (19) formed between a lower plate of the lid and that leads to a suction hose (20) connected to a pump (21) for drawing vacuum on the hose. In column 4, lines 42-54, Natterer describes how suction is applied at the suction opening (19) when the lid is opened. This allows for the removal of gases from the lid area before they can come in contact with the operator. It would have bee obvious to one of ordinary skill in the art to combine the vacuum lid and vapor removal from Natterer with the method and device of Orimo. One would add the vacuum lid and vapor removal in order to contain and shield the user from unwanted gases when the lid is open as in Natterer.

10/054,023 Art Unit: 1797

Conclusion

- 4. The Examiner notes that claims 31 and 32 were deemed allowable in the previous Office Action. This is no longer the case due to the new reference cited "Orimo". The Examiner apologizes for the previous oversight and has not made this action final due to the new rejection.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dwayne K. Handy whose telephone number is (571)-272-1259. The examiner can normally be reached on M-F 8:00-4:30. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on (571)-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
